Jitendra Bajpai
(Göttingen University)

Arithmeticity and Thinness of hypergeometric groups.

The monodromy groups of hypergeometric differential equations of type nF_{n-1} are often called hypergeometric groups. These are subgroups of GL_n . Recently, Arithmeticity and Thinness of these groups have caught a lot of attention. In the talk, a gentle introduction and recent progress to the theory of hypergeometric groups will be presented.

Donnerstag, 21.11.2019

12 - 13, Raum g117

Hauptgebäude der Leibniz Universität Hannover

Alle Interessierten sind herzlich eingeladen.
