"Approximations and adjoint functors in algebraic triangulated categories"

It may be a tricky point to prove that a triangle functor has a left or right adjoint. One way is to use a version of Brown representability. I will present an alternative approach using exact categories and Quillen's small object argument. This works in some cases where one is not able to represent functors by objects.

Montag, 15.11.2010
ab 14:00 Uhr, Raum a410
Hauptgebäude der Leibniz Universität Hannover

Alle Interessierten sind herzlich eingeladen.
